SUMMARY

Self-taught builder, 18. Joined a TON/Telegram startup at 16 as its designer and grew into CTO in twenty months, now leading a team of 8 across 4 products, including a Telegram platform with **100,000+ organic users**. AI-native: I ship with Claude Code, build MCP servers and LLM systems that run in production, and have published open-source libraries on PyPI and npm. CS student on the UCLA transfer track.

EDUCATION

Glendale Community College — Computer Science (A.S.), UCLA transfer track Aug 2026 – Present
Crescenta Valley High School — Diploma, Graphic Communications pathway Jun 2026
TUMO Center for Creative Technologies — game dev, motion design, web development Yerevan, Armenia

EXPERIENCE

\$DARK — Co-Founder & CTO Nov 2024 – Present · Remote
Graphic Designer → Full-Stack Engineer → CEO → CTO. Stepped down as CEO in Jun 2026 to focus on engineering.

- **NFT Roulette** (nftroulette.org) — Telegram gaming platform with **100,000+ organic users**: provably-fair RNG, anti-fraud, liveness detection, bonus engine. Migrated it under live traffic from Flask to FastAPI and from server-rendered HTML to React; added Redis for caching, pub/sub, and locks.
- **AI support platform** serving 4 products: Chatwoot helpdesk + LiteLLM proxy over Claude + my FastAPI middleware doing RAG (pgvector, multilingual embeddings) with function calls into read-only product databases.
- **darkswap.tg** — marketplace for Telegram Stars, Premium, and TON top-ups (FastAPI, PostgreSQL, TON Connect). Built an **MCP server** so AI agents (Claude, Codex, Cursor) can buy Stars and Premium through it directly.
- **Dark VPN** — VLESS infrastructure serving **20,000+ users**: multi-country routing, CDN, Cloudflare WARP, and a subscription management cabinet.
- **darksuperadmin** — internal control plane: RBAC, finance module tracking TON/TRON/ETH wallets and payroll, audit log, SSO across every panel, plus its own MCP server. Next.js 15, FastAPI, PostgreSQL, Redis, Docker.

Lotumi — Founder, web design studio for US small businesses Jun 2026 – Present · LA
• Launched in a single day: domains, site, SEO. Next.js 15 site with ~195 programmatically generated pages in 5 languages; lead-gen scraper on the Google Places and OpenStreetMap APIs.

Fastex — Community Moderator & Support Specialist Jun 2024 – Jul 2025 · Remote
• Ran 4 Telegram communities in 3 languages for an Armenian crypto exchange; frontline support for its blockchain and trading apps with no escalation path, roughly one message needing action every two minutes.

Freelance — Developer & Designer 2020 – Present · Remote
• Web apps, Telegram bots, and automation for clients I sourced myself, including YoGPT, an AI assistant with an admin panel for the YoPhone messenger. Design work for CIS creators with million-subscriber audiences.

OPEN SOURCE

- **amrkt** — 87 GitHub stars, PyPI. Reverse-engineered an undocumented Telegram gift-NFT marketplace and published a typed async Python client: trading, offers, inventory, pagination, proxy support, TLS fingerprint impersonation.
- **tonsole** — npm, TypeScript. Terminal wallet for TON on the official WalletKit SDK: encrypted keystore (Argon2id + AES-256-GCM), every transaction emulated before signing, TON Connect, CI with tests and linting.
- **afragment** — 4 stars, PyPI. Async client for the Fragment.com API. **outline-vpn-bot** — 4 stars, 4 forks; Telegram bot selling VPN subscriptions with automated key provisioning.

SKILLS

Languages: Python, TypeScript, JavaScript, Tok/Func, Solidity, SQL
AI: Claude API, Claude Code, MCP servers, LiteLLM, RAG (pgvector), LLM agent pipelines
Backend & Data: FastAPI, Node.js, PostgreSQL, Redis, async Python, REST APIs
Frontend: React, Next.js, Tailwind CSS, HTMX
Infra & Web3: Docker, Linux, Caddy, Cloudflare; TON, TON Connect, STON.fi, EVM
Design: Figma, Photoshop, Illustrator, After Effects, Premiere Pro
Spoken: English, Russian, Armenian
